

# Reverse Osmosis Chemicals

## Accepta Chemicals

### Cost Effective Quality

Made in the UK

ISO9001 Accredited

ISO14001 Accredited

Established Brand

Own Label Option

### Where are they used?

Manufacturing (all types)

Food Processing

Dairies

Drinks Manufacture

Building Services

Hotels

Hospitals

Drinking Water

Waste Water

Spas & Leisure Pools

Legionella Control

### Comprehensive Range

Boiler Water

Cooling Water

Closed Systems

RO Chemicals

Corrosion Inhibitors

Antiscalants

Disinfectants & Biocides

Descalers & Chemical Cleaners

Activ-Ox® Chlorine Dioxide

Effluent Chemicals

## Reverse Osmosis Chemicals

Accepta is a manufacturer and supplier of a range of cost effective **Reverse Osmosis antiscalants, scale inhibitors, antifoulants, RO membrane cleaners and biocides.**

With effective pre-treatment, maintenance and appropriate **RO chemicals**, membranes can give several years of useful life before they need to be replaced. However, if any of these essential elements fail rapid fouling can result and early membrane replacement may be required, often at massive cost. To help you keep your RO plant running efficiently we have developed a range of reverse osmosis antifoulants and antiscalant chemicals to slow the process of fouling, and special membrane cleaners and biocides to restore performance when needed.

Accepta's manufacturing facilities have over 40 years of hands-on experience in tackling these issues and over the years we've developed a comprehensive range of cost effective water treatment chemicals to solve all your water related problems. Our industrial water treatment chemicals keep water systems operating safely and efficiently, keeping production processes going and saving our customers money.

### Quality Assured

All our products are manufactured in our UK factory to the highest standards and go through a rigorous **Quality Control** process. Our manufacturing facilities have been ISO 9001 accredited since 1989 and more recently gained ISO14001 accreditation as part of our commitment to reduce our impact on the environment.

ISO 9001  
Reg No. FM1988

### Technical Support

Where some may talk about technical support we actually provide it. We have our own in-house UKAS accredited laboratory for microbiological and chemical analysis – for product support. Our technical team are industry experts with years of hands-on experience and their help and advice is only a phone call or email away.

## Comprehensive product range

Code	Function	Description
Accepta 2325	Antiscalant	General purpose phosphonate scale inhibitor – most popular product that suits most water types
Accepta 2091	Antiscalant	Scale inhibitor for high silica feed water conditions
Accepta 2066	Membrane Cleaner	RO Sequestrant to remove calcium sulphate fouling
Accepta 2069	Membrane Cleaner	RO Low foaming detergent for removing organic matter
Accepta 2591	Biocide	DBNPA Biocide
Accepta 2827	Biocide/ Preservative	Isothiazoline Biocide
Accepta Sodium Bisulphite 40	Chlorine Removal	40% sodium bisulphite solution for chlorine removal to protect membranes
Accepta 2326	Chlorine Removal	Easy to handle partially neutralised bisulphite solution for chlorine removal to protect membranes
Accepta 2628	Membrane Cleaner	Ammoniated citric acid cleaner for scale & iron removal

## Available Online

To find the full product descriptions and request MSDS for our Reverse Osmosis chemicals please visit [www.accepta.com/ro](http://www.accepta.com/ro) and click on the product you are interested in from the table. These products may also be available to order online dependant on your location.

## Export Distributors Wanted

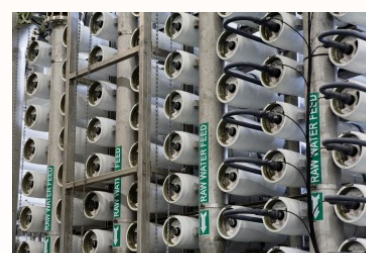

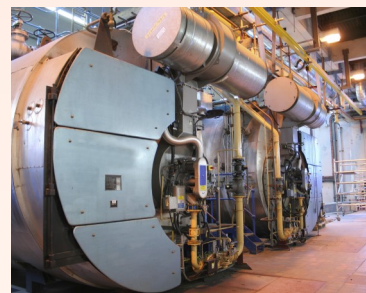

We are always looking for professional overseas partners and distributors, so if you are a water treatment specialist looking for an alternative supplier for your water treatment products, or you believe you have the capability to establish a high quality water treatment service operation in your own territory then please contact us.
