

Accepta Company Profile

Total Capability

Water Treatment Chemicals

Steam boilers & cooling towers
Building Services applications
Process and effluent treatment
Potable water & swimming pools
Bespoke product development

Water Treatment Equipment

Chemical dosage control system
Water softeners
Filtration and Reverse Osmosis

Legionella Control Services

Legionella analysis service
Legionella awareness training
Chlorine Dioxide

Consultancy, Analysis and Training

Partnered with UKAS accredited
Microbiology laboratory

Range of Microbial Analysis

*UKAS accreditation where stated

Range of Chemistry Analysis

‘Partnership’ development

The Water Treatment Products Company

Company Profile

Accepta Limited is at the leading edge of the water treatment industry, providing our customers with safe, controllable and cost-effective products for water management.

An entirely British-owned private company, Accepta has a tradition of innovation and welcomes the challenges which our industry presents, be it environmental demands to reduce chemical and water consumption or to meet the increasing burden placed on our customers through legislative compliance.

During Accepta's development, our expertise and technical resources have expanded to include our own-brand range of over one hundred treatment chemicals manufactured in-house, plus a broad range of conditioning and control equipment.

Our flexible approach to meeting the demands of our changing market, whilst retaining timeless standards of quality and customer service, has enabled Accepta to become one of the leading companies in the field of water treatment.

Partnership

Accepta has always viewed its role as one of partnership with its customers. Indeed, it is the constantly changing demands of our customers in industry, commerce and public health, which shape the very nature of the products we provide.

Increased competitiveness, environmental awareness and stringent health and safety regulations have led many organisations to critically review the use of water and energy.

We adopt a creative, flexible approach to problem solving tailored to our customers' needs and each year we save them £ millions in operating costs with our products and services. In addition to providing traditional products and services associated with steam boilers, cooling systems and process water.

Accepta combines experience and professional expertise for each customer's particular requirements, with measures designed specifically to ensure your systems operate safely and efficiently.

Through our 'partnership' approach we can customise treatment programmes to meet individual needs to achieve the objectives of customers and Accepta alike.

Quality and Innovation

Accepta's success and growth is built upon a sound base of technical excellence, an innovative approach and a commitment to quality.

All water treatment products are manufactured in ISO9001/14001 and 45001 facilities and a reflection of our commitment to quality, and our ongoing development of quality assured services and our ability to work to exacting standards.

In-house research and development has produced a unique range of products which offer significant benefits to industrial and commercial users of water – whether for heating, cooling, process, domestic or effluent treatment applications.

Our product innovation extends beyond speciality chemicals to dosage and control systems, the novel use of software for risk assessments, web based log books and online based training.

We believe innovation through partnership with our customers and suppliers ensures we can meet whatever technical, environmental or regulatory challenges lie ahead.
